

Equations

Source note Navier-Stokes.md carries latex-env: equation and one $\$ \$ \dots \$ \$$ block.

$$\begin{aligned}\rho \left(\frac{\partial \vec{u}}{\partial t} + (\vec{u} \cdot \nabla) \vec{u} \right) &= -\nabla p + \mu \nabla^2 \vec{u} + \vec{f} \\ \nabla \cdot \vec{u} &= 0\end{aligned}\tag{1}$$

Reference it: as in Equation 1, momentum couples the pressure gradient to friction. Custom text works too, see the conservation law.

$$e^{i\pi} + 1 = 0\tag{2}$$

From Equation 2 the link between the constants follows.

$$\begin{aligned}\rho \left(\frac{\partial \vec{u}}{\partial t} + (\vec{u} \cdot \nabla) \vec{u} \right) &= -\nabla p + \mu \nabla^2 \vec{u} + \vec{f} \\ \nabla \cdot \vec{u} &= 0\end{aligned}\tag{3}$$

Embed the same note again. The reference points to the first embed, see Equation 1.

A wikilink to a non-embedded note passes through as plain text: Equation-Does-Not-Exist.
